How to keep kids with food allergies safe during Halloween

Video

There are monsters and masks, superheroes and surprises.

But for some kids, it's the foods that cause the fright – not the Halloween haunts.

“It's a very concerning time, indeed, for parents of – of children who have food allergies.”

Dr. Arveen Bhasin, a Mayo Clinic allergy specialist, says you can find common food allergens in many popular Halloween candies.

And knowing which candies have potential allergens can be tough.

00:11:45
DR. ARVEEEN BHASIN:

“It’s very important to remember that the fun-size candy bars, the ingredients in those are actually different than in the full-size candy bars. So it’s critical for the parents to read the ingredients because what’s safe in a full-size candy bar may not be safe in a fun-size candy bar.”

But since 2014, the Teal Pumpkin Project has made it easier for parents to identify houses that have safe alternatives for trick-or-treaters with food allergies.

If there’s a teal pumpkin outside the door, kids might find stickers, pencils or erasers instead of candy.

So this Halloween, let the spiders and cemeteries do the scaring – not the sweets.
